

# Instructions for Groups

## First and Second Number Groups

- Hold up one of your group's hands so that the total number of hands held up by your group is equal to the number provided by your teacher.
- You may raise a second hand if needed.
- If the number displayed by your group is correct, do not raise or lower your hand.
- If the number displayed by your group is too large, wait a moment, then lower one hand.
- If the number displayed by your group is too small, wait a moment, then raise one hand.

## Result Group

- Find the first number by counting the number of hands held up by the First Number Group. Wait until the number of raised hands stops changing.
- Find the operation by observing the Operation Group.
- Find the second number by counting the number of hands held up by the Second Number Group. Wait until the number of raised hands stops changing.
- Perform the arithmetic operation in your head. Remember the syntax of operations is first number-operation-second number, just like a calculator.
- Raise one, both, or none of your hands so that the total number of Result Group arms raised is equal to the result.

## Operation Group

- You must display the operation given to you by your teacher.

## Operation and Result Groups

- Addition is indicated by placing both hands on your head.
- Subtraction is indicated by placing both hands on your hips.
- Multiplication is indicated by crossing both arms across your chest.
- Division is indicated by placing both hands on your knees.
